

AZD vehicles offer up to 40% fuel economy improvement, save up to 30% in maintenance costs and reduce greenhouse gas emissions.

AZD Balance™ Hybrid Electric Ford E-450 Cutaway and Strip Chassis

Azure Dynamics (AZD) develops hybrid electric and electric drive technology for commercial trucks and shuttle buses. Working in collaboration with Ford Motor Company, AZD has developed a parallel hybrid electric drive system for Ford's E-450 Cutaway and Strip Chassis trucks. The parallel hybrid drive system manages the conventional 5.4 litre Triton gas engine and the 5-speed automatic TorqShift transmission to produce a cleaner, more fuel efficient vehicle for your business needs. The hybrid features electric-launch assist, engine-off at idle and regenerative braking which combine to improve fuel economy and reduce greenhouse gas emissions.

AZD Balance™ Hybrid Electric Ford E-450 Cutaway and Strip Chassis

Parallel Hybrid Vehicles

AZD's Balance™ Hybrid Electric Ford E-450 offers you a clean alternative for your fleet needs today. Depending on your duty cycle you can experience up to 40% fuel economy improvement, up to 30% lower maintenance costs and a reduction in greenhouse gas emissions by up to 30%.

Some specifications for you to consider:

- E-450 Stripped & Cutaway Chassis available
- GVWR up to 14,050 lbs
- 5.4L Gas engine with Torqshift automatic transmission
- 158 or 176 inch wheelbase
- Minimum body width requirement of 86 inches

Driving a world of difference
